

SUPERCALM™
Sensory Wellbeing Solutions for Children

OUR MOVEMENT
BREAKS WORK
WONDERS....
for everyone

READ OUR CUSTOMER REVIEWS

This has been a wonderful addition to our school and a wonderful resource that supports Self regulation and movement breaks. As a school we have found it is a great transitional activity for children and the whole school is benefiting from the circuit multiple times in the day.

Catherine O'Shea (Ballyfinane N.S)

We have installed two amazing sensory pathways from SUPERCALM. These pathways, universal in design, have made a significant difference to the children in our care in so many aspects of their school life. They are used on a constant basis and are an invaluable part of our school

Ms Valerie Keogh
(Principal, St Oliver Plunketts School)

Thank you so much for the wonderful pathway! I wish we had captured the children's reactions when they saw the different parts so we could show you - they were absolutely thrilled. Our older children absolutely love the regulation station.

Pavel was absolutely amazing - so patient and an absolute perfectionist. He was so good to deal with.

Maria O'Rourke (St Peter's National School)

The students really loved all of the new additions they will really help with the year ahead.

Marie Crowley
Scoil Chlochair Mhuire

I really couldn't believe how much the children loved the cloud lighting. The fact they can control the light colour seems to really calm them. The kids get great use from the climbing wall and the sensory floor path we had installed too. We are delighted with the results

Jeannie Kyle (Owner -
Tiny Tois Creche & Childcare)

WORK WONDERS ...for students, Teachers & ISA's

Consistent & Structured Movement Breaks

Benefits for Students:

The visual consistency in itself is highly regulating for a child.

Benefits for Teachers:

Ability to estimate time student will be absent from the classroom for lesson planning.

ISA (SNA):

Benefits from a structured support program to enable a student to return to class quickly having their sensory needs met.

It's Brain Science - Widely Endorsed

SUPERCALM's approach centers around purposeful exercises and movements, scientifically shown to increase the production of calming neurotransmitters like serotonin and dopamine. These activities help counterbalance the sensory demands and stressors of the school environment, promoting better emotional regulation.

Universal in Design

SUPERCALM Sensory products are designed to be engaging to all primary school age groups and all need levels. The playful graphics aim to encourage child led 'guided' regulating movement breaks. Its based on imaginative and interpretive play to support a child as they inately meet their sensory needs by following the floor and wall visuals which are designed in a alerting, calming org

anising sequence.

GOVERNMENT ENDORSED, EVIDENCE BASED, PROVEN APPROACH TO EMOTIONAL REGULATION

This Government of Ireland **Autism Good Practice Guidance for Schools** is designed to support educators in creating learning environments that are conducive to the unique needs of students with autism.

One of the key highlights of this guidance is the endorsement of sensory pathways as a suitable and proven method for providing effective movement breaks for students with autism.

NCSE have prepared a guide for educators **Sensory Space in Schools**. It is based on researched evidence and therapists' professional experience of working with schools.

Sensory Space in School. This is a invaluable resource for all schools embarking on their inclusion journey. Sensory corridors are promoted to support transitions between classes and are an ideal tool for movement breaks.
